Apr 7, 2022

Overview of week 14, April 4-8

- We have two project groups based on the selection below
 1. Neural Networks and Boltzmann Machines with [material](#)
 2. Path integral Monte Carlo project
- [Video of lecture](#)
- [Handwritten notes](#)

Schedule. Since the majority of you plan to work on neural networks and Boltzmann machines, we will have lectures on this topic for the rest of the semester. We meet each Thursday at 2.15pm for theory lectures and discussions till approx 4pm. The remaining three hours are dedicated to project work.

Alternatives for project 2

1. Fermion VMC, continuation of project 1
2. Deep learning applied to project 1, either neural networks or Boltzmann machines

3. Hartree-Fock theory and time-dependent theories
4. Many-body methods like coupled-cluster theory or other many-body methods
5. Quantum computing and possibly quantum machine learning
6. Suggestions from you
