Symbols and Notation	xi
Introduction	1
I Mathematical Background	17
1 Key Points	19
2 Probabilistic Inference	21
3 Gaussian Algebra	23
4 Regression	27
5 Gauss–Markov Processes: Filtering and SDEs	41
6 Hierarchical Inference in Gaussian Models	55
7 Summary of Part I	61
II Integration	63
8 Key Points	65
9 Introduction	69
10 Bayesian Quadrature	75
11 Links to Classical Quadrature	87
12 Probabilistic Numerical Lessons from Integration	107
13 Summary of Part II and Further Reading	119
III Linear Algebra	123
14 Key Points	125
15 Required Background	127
16 Introduction	131
17 Evaluation Strategies	137
18 A Review of Some Classic Solvers	143
19 Probabilistic Linear Solvers: Algorithmic Scaffold	149
20 Computational Constraints	169
21 Uncertainty Calibration	175

22 Proofs	183
23 Summary of Part III	193
IV Local Optimisation	195
24 Key Points	197
25 Problem Setting	199
26 Step-Size Selection – a Case Study	203
27 Controlling Optimisation by Probabilistic Estimates	221
28 First- and Second-Order Methods	229
V Global Optimisation	243
29 Key Points	245
30 Introduction	247
31 Bayesian Optimisation	251
32 Value Loss	259
33 Other Acquisition Functions	267
34 Further Topics	275
VI Solving Ordinary Differential Equations	279
35 Key Points	281
36 Introduction	285
37 Classical ODE Solvers as Regression Methods	289
38 ODE Filters and Smoothers	295
39 Theory of ODE Filters and Smoothers	317
40 Perturbative Solvers	331
41 Further Topics	339
VII The Frontier	349
42 So What?	351
VIII Solutions to Exercises	357
References	369
Index	395
